SUMMARY

A motivated graduate with a Bachelor's in Computer Science, with a strong foundation in full-stack development. Developed a website that eliminated paper workflows by engineering a centralized module for real-time appointments and inventory management.

EDUCATION

B.S Computer Science, *Sacramento State University*
Cumulative GPA = 3.5

2022 Aug – 2026 May | Sacramento, CA

CERTIFICATES

- Google IT Support Professional Certificate

EXPERIENCE

Fogarty Onsite Generator Service, *Web Developer*

2025 Aug – 2026 May

- Collaborated within an **Agile (Scrum)** team to design and deploy a **full-stack web application** using the **MERN stack** and **Firebase** authentication, optimizing the digital client onboarding and scheduling process.
- Served as the primary technical **liaison for non-technical clients**, presenting project milestones and delivering clear cost-benefit breakdowns.
- Authored comprehensive **project documentation**, including **user manuals**, **maintenance manuals**, and **system test reports (functional, integration, end-to-end, usability, accessibility)**, to ensure seamless handoffs and client satisfaction.

Recipe App

2024 Jan – 2024 May

- Engineered a responsive, web-based recipe application utilizing **Python, HTML, and CSS**, seamlessly integrating the **Spoonacular API** to fetch and deliver dynamic culinary data.
- Implemented user-centric features, advanced multi-criteria search algorithms, and full **CRUD** (Create, Read, Update, Delete) functionality for managing favorite recipes.
- Utilized **MongoDB** for scalable **database management**, designing efficient data schemas to securely store, retrieve, and update user profiles and custom application data.
- **Collaborated** within an **Agile (Scrum)** framework, leveraging **Kanban strategies** to manage workflows, meet project sprint milestones, and maintain high team velocity.

Tech Support Volunteer

2022 Aug – Present

- Consulted with **diverse users** to **diagnose device issues** across smartphones, tablets, and smart appliances, translating complex technical problems into easy-to-understand solutions.
- **Identified and resolved device bottlenecks** such as storage limitations and network connectivity issues, while recommending optimization strategies to improve the user experience.

Chroma Vector Database

2026 Feb – 2026 Feb

- Engineered a vector storage architecture utilizing **Chroma** and **LangChain** to enable efficient semantic search and document retrieval.
- Implemented a **Retrieval-Augmented Generation (RAG)** pipeline, constructing complex queries and executing strict **data verification** protocols to ensure the factual accuracy of generated responses using **gpt-oss-20b**.
- Utilized **Python** and the **Pandas** library to clean, manipulate, and structure unstructured source data before vector embedding and database ingestion.

SKILLS

Languages: Java, Javascript, Python, Typescript, C, HTML, CSS, Swift, Kotlin, SQL

Tools: Windows CLI, ServiceNow, Microsoft 365

Technologies: React, MySQL, Github, Firebase, Selenium, MongoDB, Jira

Methodologies: SDLC, Agile, Kanban, Scrum, Waterfall
